

# Drinking-water-quality EPDM – Avoid approval problems!

**To meet the current demand for drinking-water-compliant materials, Soba Inter AG collaborates closely with a compound manufacturer to produce membranes, mats, and multilayers that meet the latest drinking-water requirements.**

The semi-finished products are available in various hardnesses and comply with the relevant standards. These include EN 681-1, D KTW D1 and D2 and the new UBA Elastomer Guideline, D DVGW W-270, F ACS-NF XP P 41-250-1/-2/-3, GB WRC BS 6920 (WRAS), A OENORM B5014-1 D and E, and USA NSF ANSI 61 conformity.

If required, the elastomer can be combined with a PES mesh to give the material good axial elongation properties. The membranes and mats are produced in thicknesses from 0.5 to 6 mm.

*EPDM membranes and mats for drinking-water applications*

**All values given are average values and do not represent minimum or maximum values. Users must test suitability for their specific application.**
